# ESCO International

ESCO International develops process technologies that enable water reuse, reclaim, recycle. Our process technologies are based on renewable resources and improve environmental sustainability. ESCO International is committed to enhancing profitability, and minimizing waste at every level and in every action of the company. Accordingly, our guiding principal is "Clean Water. No Waste."

ESCO International Solutions & Technologies provide a unique portfolio of process expertise and equipment, specializing in Ozone, UV and Advanced Oxidation Processes (AOP) for water and gas effluent & odour treatment. Adapting to strict user guidelines and customer focused design means ESCO International systems are reliable and delivers high treatment standards.

As conventional treatment methods become limited in their effectiveness, never has industry been under such pressure to eliminate toxic micro- pollutants and new emerging organic contaminants from water. Our innovative solutions and technologies give ESCO International a commanding position when it comes to treating challenging and specific organic compounds from water, cost effectively reducing TOC and hard COD. We also lead in applications for water disinfection, VOCs reduction, oxidation of wide range of organic contaminants and micro-pollutants, removal of chloramines and chloro-organics, reduction in Endocrine Disrupting Compounds (EDCs) and pharmaceutical products, providing exceptional water purification for recycle, discharge, reclaim and reuse purposes.

ESCO International's equipment selection includes Ozone generators and ancillaries, UV systems; engineered AOP solutions; Ozone skid packages; Pilot plants and Laboratory services.

Working with renowned engineering and water treatment organisations and suppliers, we strive to provide the most effective solution that meets your needs.

For more information or if you need professional solution to your water or gas effluent problem, call us or email us today.
