Application sheet
Connected Cabinets
Microtronics inside

Data points:
192,000
per unit/month

REGULAR INFORMATION ABOUT THE OPERATING STATE AND USAGE | UPDATING PRICES AND OPERATING PARAMETERS | DEFINED, AUTOMATED NOTIFICATION SCENARIOS | MULTI-LEVEL ALARM SCHEDULES | SAFE DATA TRANSMISSION | POSITION DATA AND GRAPHIC DISPLAY ON AN OVERVIEW MAP

Application sheet

The application of Microtronics in connected cabinets

Regular information about the operating state and usage

Updating prices and operating parameters

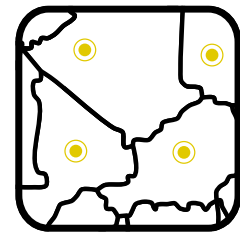

Defined, automated notification scenarios

Multi-level alarm schedules

Safe data transmission
AES | SSL

Position data and graphic display on an overview map

Requirements

- Central management of cabinets
- Efficient logistic processes
- Automated status monitoring
- Regular reports and statistics
- Alarm and notification functions
- Implementation of marketing campaigns through to the point of sale

Functional description

Vending and gaming machines are subject to very dynamic market conditions and are located in busy areas with harsh ambient conditions. Automated, permanently integrated solutions that monitor the state of the cabinets are increasingly important. Information about fill levels and withdrawals on site is essential to ensure the efficient management of the logistic processes. The malfunction of cabinets results in significant loss of turnover and must be resolved as quickly as possible. Alarm processes in the event of a fault or vandalism are therefore a high priority. With the technology from Microtronics, data transmission will become an integral part of your products. All of the relevant information is wirelessly transferred from the point of sale at fully automated, regular and event-driven intervals to the operator's central system. One unit price worldwide.

Key functions

- Regular information about the operating state and usage
- Updating prices and operating parameters
- Defined, automated notification scenarios
- Multi-level alarm schedules
- Safe data transmission
- Position data and graphic display on an overview map
- Standardised IT interfaces that can be connected to company processes

With the technology from Microtronics, data transmission will become an integral part of your products

Fields of application

- Gaming machines
- Vending machines
