Painting line for construction equipments

1937
 1958 1961

Established in 1937 by Claude Michaud, in 1952 Ateliers Michaud & Cie teamed up with Société des Ventilateurs Trilland, a company specialising in manufacturing ventilation and dust extraction facilities, combining into «Ateliers Michaud & Cie» SARL.

Headquartered Avenue du Général Frère in Lyon, Ateliers Michaud launched the manufacturing of «fuel calo AMC» hot air generators, which resulted in the company's growth and reputation.

Converted into a business corporation (a French SA) in 1958, the company built a factory in Décines in 1961, where it was installed definitely in 1972.

Specialising originally in manufacturing hot air generators, production was reorganised in 1965 towards surface treatment, and manufacturing of paint booths, stoves and cure ovens.

Instead of remaining limited to a particular sector, AMC adapted its facilities to various areas of production: from painting plastic parts for automotive, computer, rail stock, garden furniture or household appliance industries, to applying varnish on furniture and joinery wood...

Proven know-how

AMC offers a highly diversified range of products, in paint and surface treatments. Manufacturing of hot air generators, fans... ensures high control in thermal, aeratics, and dust extraction used in manufacturing paint booths, pretreatments tunnels and ovens. In addition, the construction of electric cabinets and use of programmable PLCs enhance the versatility of their know-how.

This know-how is supported by extended experience and mastering of the most modern techniques... Hence, AMC proposes standard catalogue products, specific equipment integrating standard products, associated with external devices for handling, robotics, application, heating or A/C, and its commissioning services for operating the facilities.

Surface preparation, paint, coating or enamelling, drying or curing, handling and automation, heating or A/C, dust extraction or ventilation... in metallurgy, plastics, and composite materials, wood, textile, or chemistry... Ateliers Michaud & Cie's engineering office provides the most appropriate solutions with the best quality/price ratio, energy savings, prevention, environmental protection and regulations (standards, decrees, and laws).

▲ FLUOLUX - pretreatment tunnel

▲ AMC - Technician controlling an automated system

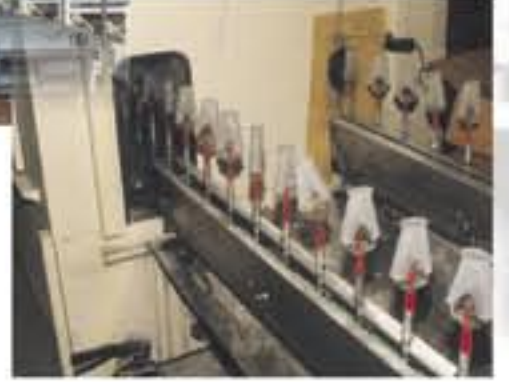

▲ BELOUBET - Multiple axes robot sprayer

▲ RVI - Vertical air flow spray booth

▲ REYDEL - Power and free overhead conveyor with buffer storage

▲ VERRERIES DU COURVAL - Perfume bottle washing and drying

customised service

The association of standard manufacturing (hot air generator, paint booths, fans...) to create specific facilities, the versatility of our assembly teams (metal sheet, frame, plumbing, electricity), after-sales performed by skilled technicians... are many assets allowing AMC to offer a «turnkeys» service, suited to the specific needs of our customers. Thanks to our skills, supported by a sales network with regional and international dealers, we are present in the field to detect needs, follow price quotes, and ensure part of first emergency after sales service. This ensures AMC's rank among the main manufacturers of paint lines, paint booths and washing air unit, ovens, curing ovens, and hot air generators.

AMC's philosophy

We are dedicated to serving our customers, listen to their problems, through our sales network of dealers. Study, design, and optimise the most adapted equipment, thanks to our know-how and CAD engineering office. Build in our workshops facilities which are effective, economic, robust, reliable, and compliant with currently enforced regulations. Guarantee and support our customers in developing maintenance for their equipment, through effective after-sales service.
