

Designer Manufacturer

MU 3 DOUBLE

Protective cabinet with three compartments

Designed to house a complete computer workstation: LCD monitor, base unit, printers and keyboard

Characteristics

- The enclosure body consists of a single thermoplastic unit so that the front, sloping top and rear are part of the same structure
- Access to both upper compartments via PMMA doors (transparent thermoplastic) - 6mm thick
- Access to computer equipment via the a sliding panel on the right hand side of the cabinet running in 10 mm deep slots
- Leaktight cabinet
- The body is a composite material, 19 mm thick, making it watertight
- Compartments protected by compression latches: doors held in place against a seal located within the frame
- With three sliding shelves: two for printers and one for the keyboard
- Connectivity: the cabinet is supplied with:
 - A strip of five 220V 10/16A electrical sockets with its own illuminated master switch
 - Two standard cable glands (7 to 13 mm) to allow cables to enter the cabinet

Monitor & Base Unit compartment:

- Front face protected by PMMA transparent protective panel, 6 mm thick
- Access is via door fitted with polyamide hinges

Printer compartment

- Access is via doors fitted with polyamide hinges
- Sliding shelf fitted to triple extending rails in stainless steel, capable of handling loads of up to 60 kg, allowing the printers to be pulled fully free

Keyboard compartment

- Compartment access via a thermoplastic, 10 mm thick door with three compression latches, seale provided by a sealing gasket in the lip of the door
- Sliding shelf in white PE running on two PE rails with mechanical stops

Advantages:

- Optimised working space
- Improved leaktightness
- Permanent protection

Available in MU3 single version and in stainless steel
