

# CILINDRI TELESCOPICI

## TELESKOPZYLINDER

## TELESCOPIC CYLINDER

FER  
HYDRAULIK<sub>s.r.l.</sub>

**COMPONENTI CILINDRO  
CYLINDER PARTS**
**PIÈCES DU VÉRIN  
ZYLLINDERTEILE**
**COMPONENTES DE CILINDRO**

## CARATTERISTICHE TECNICHE

### Materiale

I cilindri telescopici sono costruiti con tubo laminato senza saldatura grosso spessore:  
ST. 52.0 DIN -1629 R=500-650 N/mm<sup>2</sup> Rs=355 N/mm<sup>2</sup>  
MW 450 20 MnV 6 R=550-720 N/mm<sup>2</sup> Rs=420 N/mm<sup>2</sup>  
fondello e sedi sferiche in acciaio stampato:  
Fe 510 R=450-630 N/mm<sup>2</sup>.

### Sfilamenti

Il trattamento di nitrurazione salina propriamente denominato "processo TENIFER TF1 Degussa" adottato dalla **Fer Hydraulik** consente agli sfilamenti di lavorare acciaio su acciaio, quindi sono privi di bronzine o anelli di guida, potendo contare su superfici di scorrimento fortemente resistenti all'usura ed al grippaggio, ottenendo oltretutto una durezza superficiale elevata pari a HV-5/12 = 500-550.

Gli sfilamenti, grazie a quanto sopra esposto, risultano privi delle relative sedi per bronzine ed anelli e questo consente loro una resistenza meccanica nelle estremità notevolmente più elevata dello standard in commercio e di essere esenti da problemi di slabramento.

Inoltre, consente una guida maggiore in lunghezza e la possibilità di far lavorare il cilindro a fine corsa alla massima pressione.

### Superfici

Le superfici esterne delle sfilate subiscono una prima fase di rettifica e successivamente una lappatura, ottenendo un grado di rugosità pari a : Ra <= 0,15 controllato ad ogni ciclo mediante rugosimetro.

Anche in questa fase del ciclo produttivo ogni pezzo viene sottoposto a controllo mediante rugosimetro.

### Guarnizioni

Le guarnizioni e i raschiatori sono di configurazione speciale a disegno **Fer Hydraulik** :

Materiale: Poliuretano puro (Du Pont)

Pressione max. 400 Kg/cm<sup>2</sup> (395 Bar)

Temperatura: da -40 a 110 C°.

Velocità: 0,5 m/s

Olio: olii idraulici e lubrificanti a base minerale.

### Collaudo

Tutti i cilindri subiscono un collaudo funzionale finale con pressione oleodinamica pari a 240 Kg/cm<sup>2</sup> (235 bar).

I cilindri con diametro 240 mm. e oltre sono collaudati a 205 Kg/cm<sup>2</sup> (200 bar).

### Norme

Tutti i prodotti sono progettati secondo norme internazionali standard CNR-UNI 10011 utilizzando un coefficiente di sicurezza Ks= 1,5.

## TECNICAL SPECIFICATIONS

### Material

The telescopic cylinders are made with seamless rolled tube big thickness:

ST. 52.0 DIN -1629 R=500-650 N/mm<sup>2</sup> Rs=355 N/mm<sup>2</sup>

MW 450 20 MnV 6 R=550-720 N/mm<sup>2</sup> Rs=420 N/mm<sup>2</sup>

base and ball socket joints in pressed steel:

Fe 510 R=450-630 N/mm<sup>2</sup>

### Stages

The saline nitriding treatment, correctly known as the "TENIFER TF1 Degussa process", used by **Fer Hydraulik**

means that the stages can be free from bushings or guide rings as they have sliding surfaces which are highly resistant to wear and seizing, principally as a result of high surface hardness of HV-5/12=500-550.

The prime advantage of these stages is that due to the characteristics described above, they are free from the related ring and bushing seats, giving them mechanical strength at the extremities which far exceeds the standard available on the market and leaving them free from problems with burring.

This also allows a longer guide and enables the cylinder to be operated at maximum pressure at the end of its stroke.

### Surfaces

The outer surfaces of the stages are subjected to an initial grinding phase followed by honing, giving them a degree of roughness of 0.10 - 0.25 µm, tested by a surface roughness.

Even at this stages of the production cycle every piece undergoes inspection by means of a profilometer.

### Seals

The specially shaped seals and scrapers are project by **Fer Hydraulik** :

Material : polyurethane:

Maximum pressure 400 Kg/cm<sup>2</sup> (395 Bar)

Temperature from -40 to +110 C.

Maximum piston speed 0.5 m/s

Oil : Hydraulic oils and lubricants mineral based.

### Testing

All cylinders are subjected to final operational testing at hydraulic pressures of 240 Kg/cm<sup>2</sup> (235 bar).

Cylinders from diameter 240 are tested at 205 Kg/cm<sup>2</sup> (200 bar).

### Regulations

All the products are projected by international regulations CNR-UNI 10011 considered a safety factor Ks= 1,5.

## CARACTERISTIQUES TECHNIQUES

### Materiel

Les vérins télescopiques sont fabriqués avec un tube laminé sans soudure en:  
ST. 52.0 DIN -1629 R=500-650 N/mm<sup>2</sup> Rs=355 N/mm<sup>2</sup>  
MW 450 20 Mn V 6 R=550-720 N/mm<sup>2</sup> Rs=420 N/mm<sup>2</sup>  
culot et assises sphériques en acier matrice  
Fe 510 R=450-630 N/mm<sup>2</sup>.

### Enfilements Telescopiques

Le traitement de nitruration saline par "procédé TENIFER TF1 degussa" adapté par **Fer Hydraulik** permet aux enfilements de se faire sans coussinets en bronze ou d'anneaux, les superficies de glissement étant très résistantes à l'usure et au grippage, surtout grâce à une dureté superficielle élevée égale à HV-5/12 = 500-550.

De plus cette technique leur donne une résistance mécanique aux extrémités remarquablement plus élevée que la résistance standard existant dans le commerce en éliminant tout problème de déformation.

En outre, ce procédé permet d'obtenir un guidage majeur en longueur et la possibilité de faire travailler le vérin jusqu'au bout avec une pression maximum.

### Superficies

Les superficies externes des enfilements subissent une première phase de rectification et successivement un rodage, obtenant un degré de rugosité égal à 0.10 - 0.25 µm.

Dans cette phase de cycle productif également, chaque pièce est soumise à un contrôle au moyen d'un rugosimètre.

### Joints

Les joints et les racleurs sont de configuration spécial à dessin **Fer Hydraulik**

Matériel : Polyuréthane

Pression Max. 400 Kg/cm<sup>2</sup> (395 Bar)

Température de -40 à +110 C.

Vitesse Max. 0.5 m/s

Fluides hydrauliques et lubrifiants à base minérale

### Verification

Tous les vérins subissent une vérification fonctionnelle finale avec pression hydraulique égale à 240 Kg/cm<sup>2</sup> (235 bar).

Verins du diamètre 240 et plus sont vérifiés à 205 Kg/cm<sup>2</sup> (200 bar).

### Dispositions

Tous les produits sont projetés selon dispositions internationaux standard CNR-UNI 10011 considérant un coefficient de sécurité Ks= 1,5.

## TECHNISHE MERKMALE

### Werkstoffe

Die Fertigung unserer Teleskopzylinder erfolgt mit gewalztem Rohr ohne Schweißungen aus:  
ST. 52.0 DIN -1629 R=500-650 N/mm<sup>2</sup> Rs=355 N/mm<sup>2</sup>  
MW 450 20 Mn V 6 R=550-720 N/mm<sup>2</sup> Rs=420 N/mm<sup>2</sup>  
Bodenscheibe und Kugelsitze bestehen aus Preßstahl  
Fe 510 R=450-630 N/mm<sup>2</sup>.

### Auszugelemente

Die bei **Fer Hydraulik** eingesetzte Salz-Nitrierbehandlung mit der Bezeichnung "Verfahren TENIFER TF1 Degussa" ermöglicht den Verzicht auf Bronzelager oder Führungsringe für die Auszugelemente, da die Gleitflächen in hohem Maße verschleiß – und freßbeständig sind. Insbesondere wird eine hohe Oberflächenhärte von HV-5/12 = 500-550 erzielt. Dank der vorstehenden Vorzüge weisen die Auszugelemente keine entsprechenden Bronzelager- oder Ringsitze auf. Dies verleiht ihnen eine wesentlich über den handelsüblichen Standard hinausgehende mechanische Beständigkeit und die Abwesenheit von Verschleiß-problemen.

All dies ermöglicht zudem die Herstellung einer längeren Führung und den Betrieb des Zylinders am Endhub unter Höchstdruck.

### Oberflächen

Die Außenflächen der Auszugelemente werden in einer ersten Phase geschliffen und anschließend geläppt; Auf diese Weise wird eine Rauheit von 0.10 - 0.25 µm erzielt.

Auch in dieser Phase des Produktionszyklus wird jedes Teil einer Kontrolle unterzogen, und zwar mit dem Rauheitsmesser.

### Dichtungen

Die speziell geformten Dichtungen und Abstreifer sind von **Fer Hydraulik** Planung.

Material : Polyurethan

Druck Max. 400 Kg/cm<sup>2</sup> (395 Bar)

Temperatur von -40 bis +110° C.

Geschwindigkeit Max. 0.5 m/Sek

Mineralische Hydraulik- und Schmierflüssigkeiten

### Abnahme

Alle Zylinder werden einer abschließenden Funktionsprüfung mit einem hydraulischen druck von 240 kg/cm<sup>2</sup> (235) unterzogen.

Zylinder ab Durchmesser 240 werden bei 205 Kg/cm<sup>2</sup> überprüft (200 bar).

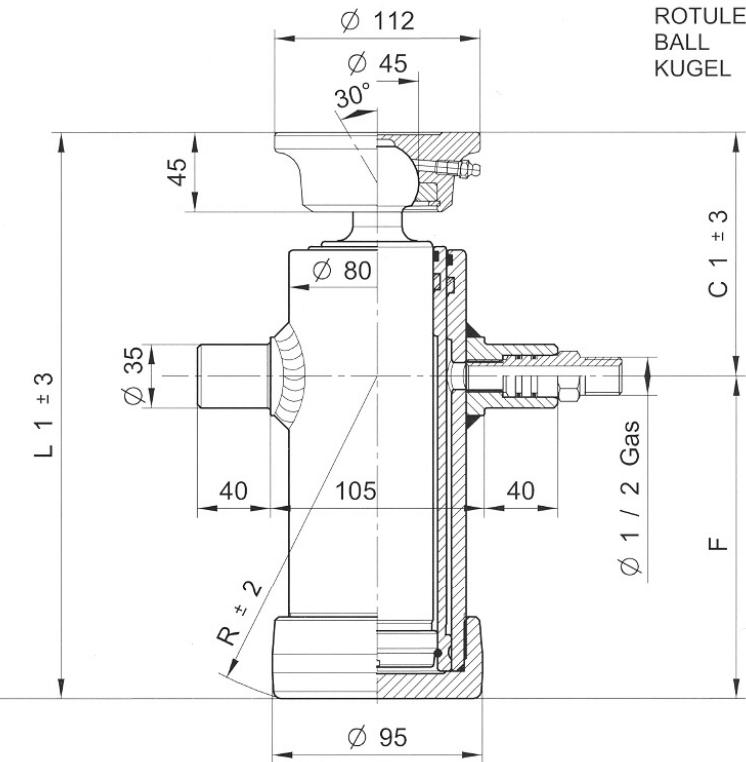

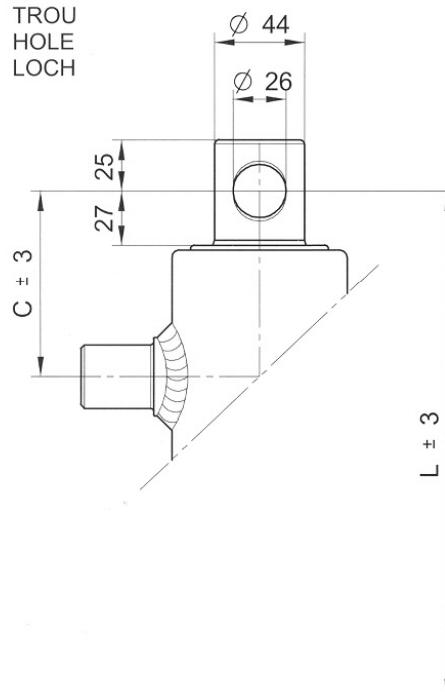

### Vorschriften

Alle produkte sind nach den internationalen vorschriften standard CNR-UNI 10011 entworfen mit einem sicherheitskoeffizient Ks= 1,5.
