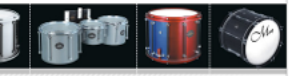
NEW TEND OF DRUM

Ming Drum with abundant production experiences and R&D capabilities has engaged in the processing of drum accessories since 1990 and the manufacturing of drums in 2000. After continuous research and development and testing, Ming Drum successfully utilized the high plasticity, strength, density, and lightweight carbon fiber composite material in the production of drums. Having overcome the weight barrier in the structurally improved and patented drums, the product uniqueness of Ming Drum is demonstrated. In 2007, the Ming Carbon Fiber Composite Drum officially entered the market to provide a wide range of drums for different genders and age groups to choose from. Our products include: carbon fiber composite Drum sets, snare drums, marching drums, and boutique accessories



By the process of mechanical winding and molding, the solid and light drum shell is produced and combined with the high-density fiber material feature to create high-density resonance and produce the perfect sound.

Resistant to heat and cold, the drum is not likely to be affected by the weather, water content, etc., and the metal accessories are less subject to rust and oxidation.

Measuring 1.4mm in thickness, the drum features high strength and low weight properties, which reduces the burden on the back and lightens the load for convenient carrying.

The product is covered in selected hand-woven fiber cloth, which creates a streamlined sense of modernity and superiority.

The unique design and molding brings out the best in the fibers and woven cloth and at the same time maximizes its functions.

Ming Products, in addition to their lightweight, product strength, and dazzling appearance, also emphasize on sound quality. A variety of products intended for different genders and age groups are under planning to allow users to indulge in their drum beating pleasure.

MILITARY SERIES / *Fiberglass Shell stick Fiberglass Layer*

Fiberglass, (also called glass fiber), is material made from extremely fine fibers of glass. It is used as a reinforcing agent for many polymer products; the resulting composite material, properly known as fiber-reinforced polymer (FRP) or glass-reinforced plastic (GRP), is called "fiberglass" in popular usage.

Uses for regular fiberglass include mats, thermal insulation, electrical insulation, reinforcement of various materials, tent poles, sound absorption, heat- and corrosion-resistant fabrics, high-strength fabrics, arrows, bows and crossbows, translucent roofing panels, automobile bodies, electrical insulation and boat hulls.

Composite materials (or composites for short) are engineered materials made from two or more constituent materials with significantly different physical or chemical properties which remain separate and distinct on a macroscopic level within the finished structure. Continuous reinforced materials will often constitute a layered or laminated structure. The woven and continuous fiber styles are typically available in a variety of forms: Stain Woven, Plain Woven and Wound.

MMS1412 4.3KG
Size 14" x 12"
Shell 100% Fiberglass
Hoops 2.0mm Super Hoops
Lugs DCL Lugs
Finish Without Burst Brown

MMB2015 4.7KG
Size 20" x 14"
Shell 100% Fiberglass
Hoops 2.0mm Super Hoops + Fiberglass Ply
Lugs DCL Lugs
Finish 3M Drive Stain Woven

MMS1412-B 4.3KG
Size 14" x 12"
Shell 100% Fiberglass
Hoops 2.0mm Super Hoops
Lugs DCL Lugs
Finish Without Stain Woven

MMT1308 5.3KG
Size 13" x 8" / 14" x 8"
Shell 100% Fiberglass
Hoops 2.0mm Super Hoops
Lugs DCL Lugs
Finish Without Stain Woven

GRACEFUL SERIES / *100% Fiberglass Lacquer Shells*

GMT1408S 5.8KG
Size 8" / 10" / 12" / 14"
Shell 100% Fiberglass
Hoops 1.6mm Steel Hoops
Lugs Silk Lugs
Finish Black Wound

GMS1406 3.4KG
Size 6" x 14"
Shell 100% Fiberglass
Hoops 2.0mm Super Hoops
Lugs DTL Lugs
Finish Violet Wound

GMB1014 4.4KG
Size 14" x 14"
Shell 100% Fiberglass
Hoops 2.0mm Steel Hoops
Lugs DCL Lugs
Holes 8
Finish Black Wound

LUXURIOUS ACCESSORIES

Carbon Fiber and Carbon Fiber Composite Shells

The standard size of Ming Carbon Fiber and Carbon Fiber Composite Shells is 6" ~ 26". Thickness of shells is 1.4~1.8mm. We have three style shells: Round, Stain Woven, and Plain Woven.

Carriers

Ming Carrier uses Aluminum stick Carbon Fiber Composite Pipe to make Marching Snare drum carrier, Marching Bass drum carrier, Marching Trio Toms carrier/MC-TT, and Marching Quad Toms carrier.

Hoops

Carbon Fiber Snare Drum Hoops
Size 14" / 12"
Material 100% Carbon Fiber
Thickness 2.0mm
Finish 3M Plain Woven, Wound

Carbon Fiber Bass Drum Hoops
Size 14" / 22"
Material 100% Carbon Fiber
Thickness 7 mm
Finish 3M Plain Woven, Wound

Lugs

DCL
Die Cast Lug

CTL
Carbon Fiber Tube Lug

APL
Aluminum Alloy Throw-off with Fiber Finish

MMB2012 4.2KG
Size 12" x 12"
Shell 100% Carbon Fiber
Hoops Steel Hoops
Lugs CTL Lugs
Holes 10
Finish 3M Plain Woven

MMT1308CB 3.9KG
Size 8" / 10" / 12" / 14"
Shell 100% Carbon Fiber
Hoops 1.6mm Steel Hoops
Lugs CTL Lugs
Finish 3M Plain Woven
