

OPTIC-4

On-Column kit for OPTIC Inlet without press fit connections

With the On-Column kit, the capabilities of the OPTIC can be expanded to include true on-column injections, which normally would have required a separate injection port. Why incur the additional expense of a separate injection port when the same results can be achieved with the ATAS GL On-Column kit for OPTIC.

One inlet, more analytical options

The introduction of this novel On-Column kit for OPTIC 3 and 4 allows this reference technique to be used with the world's most versatile inlet, easily switching between techniques to get a reference chromatogram before optimizing techniques such as Large Volume Injection or Dirty Matrix Introduction or indeed permanently using the On-Column technique for the most demanding sample types.

4th generation of the world's most powerful multimode inlet
