# Network Interface Module

Control Development, Inc. has introduced a Network Interface Module, which adds wired Ethernet or wi-fi communications to any USB-type Control Development spectrometer.  Further, it allows remote operation of a spectrometer from anywhere on the network.  This module is compatible with existing custom applications, as it uses our standard CdI32 DLL API and software changes are not required.  This module executes Spec32 at full speed.  The network address for this module can be configured using CDI's standard driver installation application.

**Part Number**                         NIF

Control Development, Inc., reserves the right to change specifications without notice.
